**DETAILED ACTION**

**REJECTIONS WITHDRAWN**

1. All of the 112, 102 and 103 rejections set forth in the non-final rejection of 1/2/08, pages 2-4, paragraphs 2-7 have been withdrawn.

**REJECTIONS REPEATED**

2. There are no rejections repeated.

**NEW REJECTIONS**

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3-5, 7, 9-10, 12, 19-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brindle (US 5405666).

Brindle discloses a condom comprising a finishing powder which comprises a particulate, substantially water-insoluble (since silica is substantially insoluble in water, see column 3, lines 40-41), inorganic compound having substantially spherical particle morphology (column 3, lines 45-47), wherein the finishing powder is magnesium carbonate (column 1, lines 43-49) which has a water solubility of less than 0.05 g per 100 g of water (since magnesium carbonate is not soluble in water).

Claims 7 and 9 recite method limitations (spray drying and Aman process) in a product claim. Method limitations are not germane to the patentability of a product in a product claim (MPEP 2113) and thus the prior art need not disclose spray drying and Aman process to read on applicant's claims as written.

Brindle fails to disclose applicant's recited ranges for circularity factor. However, finding the optimum range for circularity is obvious and well within the level of one of ordinary skill in the art since finding the workable or optimum range for a result effective variable is obvious (MPEP 2144), especially since Brindle prefers spherical morphology (column 3, lines 45-47). Furthermore, it is an expected result that lowering the circularity factor improves processability since rounder particles result in lower friction.

***Allowable Subject Matter***

5. Claim 6 is allowed.

**ANSWERS TO APPLICANT'S ARGUMENTS**

6. Applicant's arguments of 3/31/08 have been carefully considered but are moot in view of the new grounds for rejection set forth above.

***Conclusion***

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 1794

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
